Agilent has a wide range of analytical instruments, technical support services, and financial and lab management services to support battery research and development.

The cell-to-pack concept offers many opportunities to further optimize the development and the production of battery systems. Cutting costs is a decisive factor for the success of electric ...

The consortium will accelerate battery R& D that is relevant and responsive to the needs of EV manufacturers and will contribute to the domestic battery supply chain and recycling ...

NREL focuses on creative answers to clean energy challenges, from breakthroughs in fundamental science to new clean technologies to integrated energy systems.

This study explores the next generation of cost-effective and high-performance battery systems and discovers near-future battery technologies, including sodium-ion chemistry and rare ...

The aim of this Research Topic is to capture and promote recent progress in the design, validation, and deployment of advanced battery packs that exemplify outstanding safety, reliability, and resilience.

This study aims to develop a correlation equation between a porous electrode structure and the effective conductivity so as to design an optimal structure for a thick electrode layer of a...

T3 is the home of enduring research within the ARMD portfolio, undertaking research that often focuses on longer-term challenges. We sustain critical aeronautics core competencies for the Nation and ...

Battery design and manufacturing decisions will be integrated in the future. Data-driven approaches are emerging with the possibility of a user-centered design. A design platform could ...

3cpack battery research and development

In order to keep pace with the accelerated introduction of battery electric vehicles, stationary storage systems and new mobile devices, it is necessary to establish new approaches for ...
