What is a 450 watt solar panel?

A 450 watt solar panel is a photovoltaic module capable of producing 450 watts of power under Standard Test Conditions (STC). These panels typically feature advanced cell technologies such as PERC (Passivated Emitter and Rear Cell), N-Type TOPCon, or bifacial designs that maximize energy capture and conversion efficiency.

How much does a 450W solar panel cost?

Strong ROI Despite Higher Upfront Costs: While 450W panels cost \$0.30-\$0.50 per watt, their higher power density reduces installation costs per watt, with typical payback periods of 6-10 years enhanced by the 30% federal tax credit available through 2032.

What is a bifacial 450W panel?

Bifacial Advantage in Real-World Applications: Bifacial 450W panels are delivering up to 27% additional energy production in optimal conditions, making them particularly valuable for ground-mount installations with reflective surfaces, effectively pushing total output beyond 540W per panel.
