Are wind turbines aesthetically pleasing?

As people increasingly want to use clean energy, wind turbines not only need to be effective but also aesthetically pleasing. Future wind turbines may use some new materials, such as transparent or semi-transparent blades, which will not be too conspicuous.

Do design-minded wind turbines protect the environment?

Wind power, then, could use all the extra help it can get. That's why now more than ever, when it comes to protecting the environment, aesthetics are key. Here, we present six design-minded wind turbines that do the job for clean energy while masking themselves as art.

Do wind turbines look like art?

Why should you design a wind turbine?

Well designed wind turbines can blend seamlessly with the surrounding environment, making it easier for people to accept and even consider using clean energy as something to be happy about. When designing a wind turbine, a challenge is how to make it both aesthetically pleasing and user-friendly.

Throughout the design process, Doucet prioritized the aesthetics of the turbines, emphasizing the importance of beauty in their functionality. By merging design, research, innovation, ...
