Does a tri-generation solar PV/T heat pump work in industrial buildings?

Coca-Ortega et al. investigated a tri-generation solar PV/T heat pump system installed in an industrial building. They analyzed its operational performance under varying environmental conditions, energy demands, performance metrics of PV/T and HP systems, and solar coverage coefficient.

What is a solar thermal pump system?

Solar PV systems and solar thermal pump systems are two common methods of harnessing solar energy, each with its own set of advantages and limitations. The integration of these two technologies results in the formation of a solar photovoltaic/thermal (PV/T) system.

How does a solar energy system work?

It simultaneously harnesses photonic and thermal energy from solar radiation, generating electrical power and collecting and utilizing the waste heat produced by PV modules during operation for heating, hot water supply, or other thermal energy requirements, thereby enhancing the comprehensive utilization efficiency of energy.

What is solar PV/T heat pump system?

Solar PV/T heat pump system is a renewable energy utilization system that integrates solar PV power generation and heat pump heating. The system can use PV modules to convert solar energy into electricity when there is sufficient sunshine and simultaneously transfer indoor heat to the outdoor through the heat pump to achieve a cooling effect.
