What is solar panel fraud?

Solar panel fraud occurs when unscrupulous companies or individuals deceive homeowners through misleading sales practices, hidden fees, and false promises about solar energy systems. These deceptive practices have multiplied as the residential solar energy industry has expanded significantly over the past decade.

Are You a real-life victim of solar panel fraud?

Real-life victims of solar panel fraud often face devastating financial consequences. Throughout the country, countless homeowners have fallen prey to these deceptive practices, with complaints to state agencies skyrocketing by over 500 percent from 2018 to 2023.

Are solar panels harmful to the environment?

Reality: While solar panels have some environmental impact during manufacturing, they more than make up for it by producing decades of clean energy. Some people argue that because solar panels require mining and manufacturing, they're actually harmful to the environment.

Do solar panels need heat?

Here's the real scoop: Solar panels don't need heat--they need light. So,during the day,as long as it's light out,your panels work tirelessly to change light particles into energy you can use. Sure,on cloudy days,their energy output might decrease a bit. But don't worry,they don't just stop working when the sky turns gray.
