Can We Rely On Renewable Energy Only? Renewable energy, sourced from natural phenomena like the sun, wind, and water, is theoretically capable of meeting all a country's energy ...

Renewable energy could supply almost half of the world's electricity by 2030. Energy from fossil fuels is polluting the air with greenhouse gases that heat up our planet and drive climate ...

Renewable energies are inevitably subject to variations in availability. That is why we need to be able to store it on a large scale and make it available to the electrical system when it is ...

If the world transitioned out of fossil fuels, could we generate the energy needed to power the world on 100 percent renewable energy? According to a new report by LUT University in Finland and Energy ...

Can Renewables Completely Replace Non-Renewables? As the world grapples with the effects of climate change and the depletion of fossil fuels, the question of whether renewable energy ...

He argues that there is a heavy reliance on hydro and biomass sources - while most countries don't have access to these, so would be reliant ...

Yes--wind and solar are cheap and getting cheaper, but they do make the grid more complicated in ways that, today, would make electricity more expensive if we relied on them exclusively.

For this week's Giz Asks, we've assembled a panel of experts to ...

He argues that there is a heavy reliance on hydro and biomass sources - while most countries don't have access to these, so would be reliant on sources like solar, wind, and storage. In ...

Even though, it is not an easy nor cheap task, some of the smartest brains from the field believe that our global energy demand can be powered entirely from these environmentally-friendly ...

Can we rely entirely on solar power

For this week's Giz Asks, we've assembled a panel of experts to discuss whether the world could ever run entirely on renewable energy--and what it would take to get there.

While solar panels and wind farms produce electricity without greenhouse gas emissions, the challenge lies in managing nuclear waste from existing plants. A report suggests that 90% of the ...
