How much wind power does China have?

China's pipeline of utility-scale wind power has grown to 593 GW and nearly 223 GW is currently under construction--more than 45% of total global wind energy development. The total installed wind power capacity in the country is now more than 700 GW, and the new capacity added reached 357 GW in 2024, which became a new record in the world.

Does China have a wind energy sector?

From steppe to power source, China's wind energy sector is revolutionizing the country's electricity supply and taking on a global leadership role. With its vast landmasses in the north and an extensive coastline, China has optimal conditions for generating wind power.

Does China have a role in global wind power development?

With this impressive new capacity, China accounts for 72% of the global market for new wind turbines - a steady increase from 65% in 2023 and 58% in 2022. Although also China also fell slightly short of the expected new capacity of nearly 100 GW, the record cements China's dominant role in global wind power development.

Does China's Wind power capacity continue to grow?

BEIJING, Dec. 20 -- China's installed capacity of wind power has continued to grow as the country accelerates its push for a green transition, official data showed Friday.

China power statistics - April 2025 In the first four months of the year, wind and solar power generation capacity accounted for 89% of new capacity (see Figure 1 below). Solar continued ...

China's installed wind power generation capacity has consistently ranked first in the world for an impressive 15-year streak, according to the latest data released by the China Electricity ...

China accounted for half of this total, ahead of the UK (19%), Germany (11%), the Netherlands (6%), and Taiwan (4%). Foreseeing a promising future for wind energy, GWEC projects ...

The new added and cumulative grid-integrated wind power capacities respectively accounted for 5.5% and

China s current annual wind power generation

18% of installed power capacities nationwide in 2024. Wind power remains ...

Cumulative wind power installed capacity was over 520 GW, accounting for almost half of the world's total. By the year-end, the installed capacity of wind power and solar PV power ...

China is building 223 GW of wind power in 2025--nearly 45% of global projects--driven by offshore expansion, grid upgrades, and economic growth.

Share of wind power in electricity generation and consumption The world's installed wind power capacity now meets well over 10% of global electricity demand - and much more than nuclear ...

From steppe to power source, China's wind energy sector is revolutionizing the country's electricity supply and taking on a global leadership role. With its vast landmasses in the north and an ...

Wind power is a kind of important green power, which plays a significant role in improving energy structure, coping with climate change and enhancing national energy security. By the end of ...

China's new energy industry has experienced rapid growth in recent years, maintaining a double-digit annual growth rate. Since 2013, the country's wind power installed capacity has grown ...
