How much solar power has China added in 2025?

The total solar capacity added from January to May 2025 reached nearly 198 gigawatts, marking a remarkable 388% increase from the same period in 2024, a year when China had already set a record for renewable power installations for the second consecutive year. Additionally, during this timeframe, wind energy capacity increased by 46 gigawatts.

What percentage of China's Electricity is generated by solar & wind?

In Q1 2025, solar alone contributed 42.5 GW out of 76.5 GW of newly installed capacity, while thermal power sources grew by just 4 percent. Solar and wind generation now contribute nearly 39 percent of total electricity output, making zero-carbon power the core of China's grid strategy and utility-scale generation mix.

Did China's new wind and solar power capacity double A year-on-year?

China's newly installed wind and solar power capacity nearly doubled year-on-year during the first half of this year, as the country ramps up its transition to cleaner energy sources, data from the China Electricity Council showed.

How much solar power is installed in China?

total installed power. Newly added solar PV accounted for 60% of China's total added installed capacity in 2023. The cumulative installed capacity of distributed PV has reached 116 GW, double the 2022 figure. The growth

Solar surged 64% in H1 2025 with 380 GW added worldwide, led by China's record pace, keeping 2025 on track for new highs.

China is setting unprecedented records in solar and wind energy installations, achieving monumental growth in May 2025. During this month, the country added 93 gigawatts of solar ...

China achieved a new milestone in its energy transition, with wind and solar power together generating a quarter (26%) of the country's electricity in April 2025, the highest monthly ...

Note: NEA considers utility-scale solar to include projects of at least six megawatts of installed alternating current capacity. Utility-scale solar power capacity in China reached more than ...

China's solar power generation

A strong growth in solar power is projected to drive the expansion of China's renewable energy generation capacity in 2026, even as average wind power utilization hours decrease slightly ...

In Q1 2025, solar alone contributed 42.5 GW out of 76.5 GW of newly installed capacity, while thermal power sources grew by just 4 percent. Solar and wind generation now contribute nearly ...

China's newly installed wind and solar power capacity nearly doubled year-on-year during the first half of this year, as the country ramps up its transition to cleaner energy sources, data from ...

China power statistics - April 2025 In the first four months of the year, wind and solar power generation capacity accounted for 89% of new capacity (see Figure 1 below). Solar continued ...

The development of wind power and solar PV in China is mainly driven by policies. The most important top-level policy documents in the field of renewable energy are the "14th Five-Year ...

China's solar power capacity has surpassed 1 TW, marking a historic milestone as the country accelerates its energy transition. Around 92 GW of new PV systems were installed in China ...
