Samoa submitted its second NDC in July 2021. Samoa's second NDC replaced the sectoral targets in its initial NDC with an absolute economy-wide reduction target of reducing total greenhouse gas (GHG) emissions by ...

Samoa's Climate Change Policy provides the foundation of actions to guide a coherence coordination of climate change actions for Samoa.

Although Samoa's global emissions are minimal, the report confirms the country is already experiencing serious climate impacts. Local adaptation efforts also include community-led risk mapping, ...

Samoa, an independent small island state in the Pacific Ocean, faces significant challenges due to climate change. This nation, which consists of two main islands and several smaller volcanic islands, is ...

Samoa's latest greenhouse gas emissions are very small in absolute terms, at about 0.17 megatonnes of CO₂-equivalent. A strong land-use and forestry sink more than offsets fossil CO₂, keeping ...

The Climate Change Policy 2020 - 2030 is Samoa's national framework to coordinate and enhance the country's response to the impacts of climate change whilst pursuing national sustainable development goals ...

Explore the pressing issue of climate change in Samoa, an island nation facing rising sea levels and extreme weather events. This blog delves into government policies aimed at emissions reduction, ...

Biodiversity is integral to ecosystems, and Samoa's unique flora and fauna are increasingly at risk due to climate change. Rising temperatures and habitat loss threaten various species native to the islands, leading ...
