With restricted access to international credit and trade, Cuba cannot easily fund new power stations or grid upgrades. Stopgap measures such as leasing floating power plants or importing small ...

As POWER has reported, Cuba's power system has faced increasing strain since 2021, with blackouts becoming more frequent due to accidents at key generation units and aging thermal power plants.

It is critical for Cuba to develop a baseload electric power system that offers the flexibility to operate on several diverse fuels, such as liquefied natural gas (LNG) and/or liquid fuels, in the case of emergencies.

The country's power grid collapsed on Friday, Oct. 18, due to the failure of one of the island's largest thermal power plants--the 330-MW Antonio Guiteras thermoelectric plant in Matanzas...

Below we will address several aspects, interconnected with each other, that portray the difficult panorama of the Cuban Electric Power System and explain as a whole the crisis that it is going through, the ...

One of the biggest, the 330-megawatt Antonio Guiteras plant in Matanzas, often breaks down because there aren't enough replacement parts to repair it. Other facilities have been hit with adverse events, ...

Authorities estimate that some equipment will be operational by late afternoon to evening, including unit 3 of the Santa Cruz CTE, with 60 MW; nine engines at the Melones site, with 155 MW; and ...

Grid operator UNE said it hoped to restart at least five of its oil-fired generation plants overnight, providing enough electricity, it said, to begin returning power to broader areas of the...

Cuba's electrical grid and oil-fired power plants are obsolete and crumbling, constructed decades ago and scarcely maintained. And because Cuba produces very little fossil fuel of its own - with limited ...
