In this video, we explain the process of setting up solar inspection flight plans using the DJI Mavic 3 Thermal (M3T) and DJI Pilot 2 to conduct aerial thermography solar inspections...

My main focus is on using these techniques to inspect solar panels. To collect data and capture images, I've been using a DJI Mavic 3T drone. I've been following many forums here, code ...

Read about Raptor Maps and how they use the Mavic 3T with its latest update to improve solar farm data capture and pilot efficiency.

It enables precise detection of solar panel defects, sediment buildup, or damage through its high-resolution visual and thermal (M30T) sensors. The series also supports dual-control operations and ...

I am using Mavic 3T and Drone Deploy. No post processing needed. Using raw images, create map and make annotations of anomalies from DD. Glad to share a sample 2MW farm if you ...

The DJI Mavic 3 Thermal (M3T) has established itself as a game-changing tool for professionals in renewable energy, public safety, and infrastructure monitoring.

Raptor Maps, a leading provider of solar software, is collaborating with DJI to provide input and testing for the latest update to DJI's Pilot 2 flight planning software (update notes).

In this webinar we will walk through Volateq 's software solution that facilitates operators to autonomously perform solar field inspections in alignment with their maintenance plans to improve ...

Using MapperX in conjunction with the DJI Mavic 3T provides a major advantage in the maintenance of solar power plants. MapperX, a fully autonomous artificial intelligence software, improves the ...

Panel inspection with the Thermal Drone DJI Mavic 3 T allows you to stay informed about the performance of

DJI 3T builds photovoltaic panels

your PV system. It provides information on energy consumption and production, as ...
