What is a data center rack?

Data center racks are metal frames used for organizing IT equipment such as servers and switches. Cabinets are enclosed racks that offer added security and environmental control. Cages are secure areas within a data center that house multiple racks or cabinets, providing an extra layer of security.

What is a data center cage?

A cage, on the other hand, is a secured, enclosed area within a data center that contains one or more racks and offers an extra layer of security and isolation. While racks are used to organize and hold hardware, cages are used to separate and secure the racks, cabinets, and equipment of different customers or projects.

Where are servers and networking equipment located in a data center?

Inside a data center, servers and networking equipment are securely housed in racks, cabinets, and cages. Because racks and cabinets are often the first pieces of equipment that organizations install, it is crucial to make informed choices to ensure optimal performance.

Are enclosed racks a good choice for a data center?

This makes them well-suited for transportation or for use in unstable environments. Enclosed racks are ideal for high-density data centers and server rooms, as they are designed to accommodate heavier and hotter equipment, as well as higher wattages per rack.

We offer enclosure cabinets with IP54 rating for industrial applications. Protect your IT from dust and splash water with racks from SCHÄFER IT-Systems. Call +49 2741 283-770
