-----

Solar energy is affordable, clean and has been the fastest-growing energy source in the last decade. It can be used for electricity and heating, while also helping reduce EU dependency on ...

Solar energy, in particular photovoltaics (PV), is currently the fastest growing renewable energy source in the EU. Last year, 56 GW of solar PV were installed in the EU, two thirds of it on ...

The unprecedented EU Solar Strategy aims to provide the right framework to massively deploy solar PV energy in Europe, and sets out new objectives of almost 320 GWac (400 GWdc) by 2025 and almost ...

European solar companies say that local content rules in the EU's proposal to boost the bloc's renewables manufacturing will make the transition to clean energy more difficult because of...

Solar is central to the EU's hopes to generate 45 per cent of its electricity from renewable sources by 2030. Since August, however, eight European solar supply chain companies have...

Under the European Green Deal and the REPowerEU plan, solar power is a building block of the EU's transition to cleaner energy. Its accelerated deployment contributes to reducing the ...

After four record years, EU solar additions are now set to decline for the first time in a decade, as negative wholesale prices and frequent curtailments erode profitability and deter new...

Countries across Europe saw a jump in their solar output, with at least 13 EU member states reaching their highest monthly levels on record. The Netherlands stood out by generating ...

The EU funds research aiming to find new materials, better design photovoltaic cells to make more efficient solar panels and lower the cost of generating electricity.

# EU blocks solar panels from generating electricity

The European Solar Charter, signed on 15 April 2024, sets out a series of voluntary actions to be undertaken to support the EU photovoltaic sector.
