ACP and Wood Mackenzie forecast that 92.9GW/317.9GWh of storage will be installed in the US over the next five years, driven by project economics and policy incentives.

The global energy storage market is poised to hit new heights yet again in 2025. Despite policy changes and uncertainty in the world's two largest ...

The U.S. energy storage industry installed a record-shattering 57.6 gigawatt-hours (GWh) of new capacity in 2025, the largest single year of new battery capacity additions on record. Despite ...

However, the market is positioned for strong recovery, with double-digit year-over-year growth projected for 2028 and 2029 as domestic manufacturing capacity comes online. Overall, ...

A record-breaking 380MW of residential storage was installed in the fourth quarter, marking an increase of 6% over the year ago period. Meanwhile, 145MW of community-scale, ...

Over 12 GW of Distributed storage is forecasted over the 5-year forecast period. The residential segment will install 80% of this capacity as financial value streams open across the country, interest ...

While increased tariffs and phase-outs of tax credits have the potential to reduce the base case for energy storage by 20% over the next five years, growth is expected to pick up thereafter.

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...
