Are global solar installations on track for another record year?

Global solar installations are on track for another record year. In the first six months of 2025, the world added 380 GW of new solar capacity -- 64% higher than during the same period in 2024, when 232 GW were installed.

Are global solar installations breaking records again in 2025?

Global solar installations are breaking records again in 2025. In H1 2025, the world added 380 gigawatts (GW) of new solar capacity - a staggering 64% jump compared to the same period in 2024, when 232 GW came online. China was responsible for installing a massive 256 GW of that solar capacity.

Which country has the most solar PV installations in 2025?

Global solar PV installations experienced significant growth in the first half of 2025, with the total reaching 380 GW DC, a remarkable increase of 64% compared to the previous year. China dominated the market, contributing 67% of the total installations with 256 GW DC, while India and the US followed with 24 GW and 21 GW, respectively.

How many solar PV installations are there in China?

China's 198 GW AC solar PV additions between January and May 2025 made the country the 1st in the world to exceed 1 TW in cumulative installations. New installations of 14.36 GW AC in June this year expanded its capacity to 212.2 GW AC.

Retail investing has undergone a seismic shift. Global market activity, once dominated by institutional players now includes a rapidly growing share of individual investors. However, many ...

To transform AI governance from fragmentation into shared growth, nations need a common framework to align AI sovereignty, interoperability and inclusion.

Even as the U.S. guts support for renewable power, the world is still pushing ahead on the shift to solar energy, with installations up 64 percent in the first half of this year. Solar is the fastest ...

The World Economic Forum's Global Risks Report 2023 explores some of the most severe risks we may face

over the next decade that include energy supply and food crisis, rising ...

Record-Breaking Growth Amid Global Headwinds Despite inflation, supply chain disruptions, and geopolitical volatility--especially stemming from the ongoing Russia-Ukraine ...

Global solar PV installations experienced significant growth in the first half of 2025, with the total reaching 380 GW DC, a remarkable increase of 64% compared to the previous year. China ...

Recently, industry associations and research institutions worldwide have generally revised upward their forecasts for new solar PV installations in 2025. The China Photovoltaic Industry ...

In a time of fragmentation, ASEAN stands out as a rare economic bright spot because it's leveraging global uncertainty into a strategic advantage.

Global solar installations are breaking records again in 2025. In H1 2025, the world added 380 gigawatts (GW) of new solar capacity - a staggering 64% jump compared to the same period in ...

World installed 380 GW of new solar capacity in first six months of 2025 Global solar installations are on track for another record year. In the first six months of 2025, the world added 380 ...

Global solar PV installations set another record in 2024, reaching 597 GW - a 33% increase over 2023, and 148 GW more the previous year (Fig. 1). Although the annual growth rate ...

The Global Risks Report 2026 analyses global risks through three timeframes to support decision-makers in balancing current crises and longer-term priorities.

Other top nature and climate news to know: Wildfire pollution reaches homes of one billion every year; Europe unblocked over 500 dams in 2024.

2025 has been marked by significant global shifts, including increased geopolitical instability, the accelerating impact of AI and a changing labour market.

A well-integrated global financial system is a critical driver of economic growth. Rising geopolitical tensions between countries are increasing the fragmentation of the global financial ...
