Our medium-speed PMGs operate with a single- or two-stage gearbox. Combining the advantages of low- and high-speed technology, these PMGs offer extremely high availability and reliability, resulting ...

Wind turbines for high-speed winds using permanent magnet generator or PMA design. Optimized for stable, efficient power at higher RPM and wind conditions.

Type 5 turbines consist of a typical WTG variable-speed drive train connected to a torque/speed converter coupled with a synchronous generator. The torque/speed converter changes the variable ...

Wind turbines work on a simple principle: instead of using electricity to make wind--like a fan-- wind turbines use wind to make electricity. Wind turns the propeller-like blades of a turbine around a rotor, ...

Wind power the past 30 years to leading wind turbine customers all over the world. We have solutions for all the main drivetrain concepts from direct drive to medium and high speed and we supply ...

Horizontal axis wind turbines (HAWT) are the predominant design, featuring blades (usually three) symmetrically mounted to a hub connected via a shaft to a gearbox and generator.

Inside the generator body awaits a built-in powerhouse combo: a 10 kW wind power generator and an IoT (Internet of Things) charge controller. Unbox efficiency and unleash the full potential of the ...

Explore the different types of generators used in modern wind turbines, their advantages, and how they impact overall turbine performance.
