What size solar inverter do I Need?

Your inverter size should match your solar array's capacity, not your electricity bill. This means your inverter doesn't need to power your entire home--it just converts whatever your panels generate. Let's say you have a 6kW solar array (twenty 300-watt panels).

How do I choose a solar inverter?

Knowing your array size allows you to choose an inverter that can handle that production efficiently--without over- or under-investing in capacity. The second step is understanding your system's DC-to-AC ratio, one of the most important metrics when sizing a solar inverter.

How many inverters do you need for a 12 kW solar system?

Inverter: one or two inverters of a combined 10kW-15kW A 12kW solar installation in a farm near Berlin utilized a 10kW inverter with excellent results--saving a couple of hundred dollars on initial cost and still registering peak output.

How many kilowatts can a solar inverter handle?

For example, a 5kW inverter is designed to handle up to 5 kilowatts of continuous power coming from your solar panels. If your solar array generates more than the inverter's rated capacity during peak sunlight hours, the inverter won't be able to process all of it--some energy will be clipped or lost.
