-----  
How many solar panels can be installed on a roof?

You'll need to pay attention to specific measurements, particularly if you want to install the largest number of panels on your roof. The average size of a solar panel is three feet by five feet. This will allow you to have a rough estimate of how many panels you can accommodate.

Should I choose solar panels if I have a large roof?

If your home is small or has an unusually shaped roof, the power output and efficiency of your solar panels are especially important to consider. With a large roof, you can probably choose less efficient solar panels because you have more space for more panels.

Can solar panels be installed on a roof with less than 10 years?

Our solar professionals model different scenarios to find the right balance between system size and budget comfort. Installing solar panels on a roof with less than 10 years of remaining life is false economy.

How many solar panels should a house have?

Before you begin thinking about generating 100% power for your home, which according to many residents is 20 to 24 panels, there are some things you need to consider. This will help you to calculate not only your roof area and restrictions, but also your budget to find that sweet spot.
