-----

Among them is Huawei, which has patented a sulfide-based solid-state battery capable of delivering driving ranges of up to 3,000km and ultra-fast charging in just five minutes.

Even though Huawei doesn't manufacture batteries, the company is putting plenty of R& D resources into developing a new solid-state battery tech. The newest patent reveals a battery pack that can go for ...

Huawei has filed a patent for a pioneering new sulphide-based solid-state battery that will offer EV drivers a range of up to 3000km and an ultra-fast charging time of just five minutes.

If commercialized, Huawei claims the battery could enable EVs to travel up to 3,000 kilometers (roughly 1,864 miles) on a single charge.

Huawei has filed a patent detailing a sulfide-based solid-state battery design with energy densities between 180 and 225 Wh/lb, roughly two to three times higher than today's typical electric...

The move for tech giants to start investing in solid state batteries is said to be a growing trend, as firms like Huawei attempt to break free of their reliance on third-party battery suppliers.

Huawei's lithium battery solutions enable intelligent energy storage and peak shifting, upgrading backup power systems to improve flexibility and reliability.

Huawei doesn't even make EV batteries, you might say -- and you'd be right. But they've been quietly getting serious about battery materials and electrolyte synthesis, signaling a deeper ...

Huawei is the latest in a growing list of automakers and tech companies that are exploring the possible benefits of fitting an EV with solid-state batteries, with the likes of BMW,...

Whether Huawei's design proves manufacturable or merely monetised via royalties, it sharpens industry focus

# Huawei sells pack lithium batteries

on dry solid-state as the chemistry most likely to leapfrog today's Li-ion ...
