What happens if you install solar panels too late?

If you install your solar panels too late, you may be ineligible for certain incentives, or incentive programs will change their rates for the new year. If you want to get the most out of your solar panel system, you'll want to install it before the year ends to maximize the amount you get from solar incentives and federal tax credit programs.

When should you install solar panels?

If you don't mind longer wait times and slightly higher installation fees and prefer to start bankrolling solar credits right away, you'll want to install solar panels during the summer. But if you're looking for shorter installation times and lower fees, you should wait for the spring or fall.

Is it a bad time to install solar power systems?

Overall, there is no bad time to install solar power systems, as you'll be making a major step toward paying lower electricity bills, producing clean energy, and improving the value of your home. But, there are times throughout the year that installations are less optimal.

When is the best time to install a solar energy system?

Solar companies are most busy during the height of summer, pushing more ads and doing the most installations and repairs during this time. As a result, you may wait several weeks before your solar energy system can be installed, even longer in high-traffic states like California, Texas, or Arizona.

Solar energy has been gaining momentum for years, but many homeowners are wondering: "Is now the right time to go solar, or should I wait?" With fluctuating electricity rates, ...
