Why does Morocco import electricity?

Because of that, Morocco relies on energy imports to satisfy the growing domestic demand. The country has traditionally been a net importer of electrical energy, although the net electricity imports have gradually declined. Morocco's energy sector is, nevertheless, in continuous expansion.

How has Morocco transformed its energy sector?

Morocco's energy sector has undergone significant transformations, with the government implementing strategies and policies to address climate change and promote the transition to renewable energy and energy efficiency that generalizes across all related sectors of the economy (housing, transport, industry).

How is energy used in Morocco?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

What percentage of Morocco's electrical capacity is renewable?

As of the end of 2022, the share of renewable energy in Morocco's electrical capacity mix stood at 38 %, or 4154 MW, with a total installed capacity from renewable energy sources at 4031 MW, corresponding to 38.2 % of the total installed electrical capacity .
