Why should you use a bidirectional charging station?

With a bidirectional charging station you turn your electric car into a home battery that can store the remaining solar energy. This not only saves you money, but you are also extremely sustainable. At Wallbox Discounter, sustainability is one of our core values. In our range we only offer products that ensure a sustainable and greener world.

How much does a bidirectional charging station cost?

Because bidirectional charging is a fairly new concept, it is difficult to give a price estimate. The price of a bidirectional charging station is currently around EUR1,269. This price does not include any installation costs.

Which charging station can charge bidirectionally?

What is bidirectional charging with a v2h charging station?

Bidirectional charging with a V2H charging station is the most well-known way of bidirectional charging. V2H is the abbreviation for Vehicle to home and thus literally means that you can deliver power from your car to your home. So here, the car is actually an extra battery/source of power. Are you looking for a V2H charging station?

Can a bidirectional charging station charge a car in two directions?

Bidirectional charging posts can in fact charge in two directions. This means that the bi-directional charging station can charge the car as normal, but also that it can supply power back from the car to power various devices in the house. This means that your electric car can soon be used as an additional source of power for your household.
