---

The thermoelectric generator (TEG) harvester and the photovoltaic (PV) harvester use heat thrown off by machines or light from their surroundings to provide the sensor with enough energy to take ...

To investigate the wind-induced vibration characteristics of photovoltaic array tracking supports, this study uses the harmonic superposition ...

Commercial PV modules are experimentally and numerically investigated in mechanical terms. A non-destructive diagnostic strategy based on vibration frequency analysis is proposed. The ...

Wireless vibration monitoring has moved from "nice experiment" to a serious tool in modern reliability programs. Plants that once relied entirely on periodic vibration routes, reactive repairs, and ...

Using wireless vibration sensors affixed to a machine, teams can screen asset data to determine whether they are functioning correctly or if an inspection is necessary.

In this study, field modal testing of a flexible PV support structure was conducted, and high-order modal properties were identified from multi ...

Solar tracking systems track the trajectory of the sun to more efficiently capture radiation, which is then converted to electrical energy. Solar tracking systems, however, are subject to...

These advancements are making vibration monitoring systems more accessible, scalable, and cost-effective for a broader range of solar PV applications, including commercial and residential installations.

Meggitt VE and PV series sensors provide low-frequency vibration monitoring for turbines, with versatile outputs and wide temperature support.

A comprehensive field modal testing of the flexible PV support structure is conducted, obtaining its high-order modal parameters in the first time from vision-based and sensor-based ...
