Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, according to a new ...

The world's wind and solar farms have generated more electricity than coal plants for the first time this year, marking a turning point for the global power system, according to research.

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal,...

Renewable energy has generated more electricity than coal for the first time in history, signaling a major global shift toward clean energy.

The biggest story in the data is the dramatic growth of solar energy, with a 30 percent increase in generation in a single year, which will allow solar and wind combined to overtake coal in...

Almost 70 gigawatts (GW) of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which represents a 49% increase in U.S. solar operating capacity ...

The United States reached a major milestone in diversifying generation in 2024, as wind and solar combined to generate more electricity than coal for the first time.

Global electricity generation from solar and wind has surpassed coal for the first time, signaling a fundamental shift in the world's power mix.

For the first time, renewable energy has overtaken coal as the primary source of electricity around the world, a new report says, indicating a shift in the global reliance on environmentally...

# Power generation far exceeds solar energy

LITTLETON, Colorado, Aug 29 (Reuters) - Global electricity generation from solar farms has exceeded generation from wind farms since May, marking the longest ever stretch when solar...
