What are projector models used for?

Models today target specific roles: permanent installation in a home theater, room-to-room portability for home entertainment, presentations in a conference room, or some other niche. I'm PCMag's projector expert, with nearly four decades' experience reviewing display technology, including projectors from their earliest days.

What is a solar portable DLP projector?

The smaller box of the Solar Portable leaves room for only a 2x 3W set-up compared to the far beefier potential of the Mars 2's 2x 10W array. At the core of the Solar Portable DLP projector is a single 0.23-inch DMD (digital micromirror device) with native 1920 x 1080 resolution. The LED has a lifespan of over 30,000 hours.

What is the best outdoor projector?

If your goal is effortless backyard movie nights, pick the Anker Nebula X1, the best outdoor projector. Its triple-laser light engine produces a bright, richly saturated image that still looks punchy after sunset with a few patio lights on, and it scales cleanly to large outdoor screens.

What is a home theater projector?

Models listed as home theater projectors are typically optimized for traditional home theater viewing in a dark room. They tend to offer more accurate color, better contrast, and lower brightness than home entertainment projectors. Many don't include speakers.

Designed with sustainability in mind, our solar projector charges during the day using sunlight, making it a zero-emission solution for all your projection needs. No electricity required--just place it in a sunny ...
