-----  
How many solar panels does a garage roof need?

At a minimum, that tends to mean at least six 450-watt (W) panels, as any fewer won't generally save you enough money on your energy bills to make it worth the upfront cost of solar. And even large garage roofs in the UK don't always have the roughly 20m<sup>2</sup> of space that it takes to fit six panels to industry standards.

How do you install rooftop solar panels in a garage?

This will include taking a look at your loft space, so they can assess the rafters. However, if your garage has a flat roof, this will present issues. The standard way to fit rooftop solar panels is to drill into the rafters, attach mounting brackets and rails, and secure the panels to them.

How does a solar company treat a garage roof?

A good solar company will treat a garage roof in the same way as any other roof: by taking steps that assess whether it's structurally sound and ready for a solar installation. This will include taking a look at your loft space, so they can assess the rafters. However, if your garage has a flat roof, this will present issues.

Can you put solar panels in a garage?

But if your garage is housing the battery and inverter as well as the panels, your installer will need to feed an AC cable and communication cable from the garage to your home. Putting solar panels on an attached garage is a much simpler, less expensive process.

When you're switching to solar, it's always best to get as many panels as possible - and with a garage roof, you can boost your savings without adding much to your costs. Though garage ...
