Find the most up-to-date statistics about the solar photovoltaic industry in Europe

Solar accounted for 22% of electricity in the European Union in June, surpassing nuclear as the largest source, while renewables supplied 54% of net power in the second quarter, driven by ...

Solar reached new highs in the majority of EU countries in June 2025, with at least thirteen countries recording their highest ever month of solar generation. These solar records are ...

Wind and solar overtook fossil fuels in the European Union's power generation last year, a report has found, in a "major tipping point" for clean energy.

Solar power consists of photovoltaics (PV) and solar thermal energy in the European Union (EU). Solar power is growing in every EU country.

Wind and solar power produced more electricity than fossil fuels in the EU for the first time last year, data published on Thursday showed, indicating the bloc's continued shift towards...

For the first time, solar became the EU's largest single generation technology in June 2025, providing 22% of total power output. Together, wind and solar are set to deliver over 30% of ...

According to new data from Eurostat, renewable energy sources generated 54% of the EU's net electricity in Q2 2025, up from 52.7% year-over-year. The growth came mainly from solar, ...

June 2025 was the first month in history where solar energy (22.0%) was the main source of electricity generated in the EU, ahead of nuclear (21.6%), wind (15.8%), hydro (14.1%) and ...

In the first half of 2025, Germany and many other European countries generated more solar power than ever before. This was offset by lower electricity generation from wind energy.
