The design improves material flow and energy use by producing 0.65 L/m²/h of fresh water with sunlight and 90% humidity. A team of researchers developed a system that can ...

Using heat exchange and condensation, Aquaria's generators draw air into their systems, cool that air below its dew point, and as it condenses, capture that water and filter it for ...

Herein, a fully passive SAWE system that can continuously produce freshwater under sunlight is presented.

A new solar-powered water harvester developed by KAUST uses a self-sustaining cycle inspired by natural plant processes to efficiently extract water from the air, requiring no manual ...

Researchers have invented a solar-powered device capable of extracting several litres of water from thin air in a single day.

MIT engineers built a solar panel that turns desert air into clean drinking water -- no electricity, pipes, or moving parts needed. Powered only by sunlight and advanced MOFs, it's a ...

MIT scientists have created a solar-powered device using advanced MOF material to extract clean water directly from air. This breakthrough could help tackle water shortages worldwide, ...

Solar-powered box extracts 264 gallons of drinking water from air per day Aquaria's line of atmospheric water generators can provide clean drinking water to drought-stricken regions.

MIT scientists have developed a solar-powered device that can extract clean drinking water from air, potentially addressing global water shortages.

At the heart of this drought-busting technology is a solar-powered device that harnesses the power of the sun to extract moisture from the air. The system consists of a solar absorber plate ...
