-----

In order to optimize the economic operation level of the active distribution network and improve the energy utilization rate, a layered coordinated intelligent control method of source network ...

In this paper, an integrated planning and scheduling methodology has been developed for the source-network-load-storage power system, factoring in a diverse array of energy storage modalities.

This paper is devoted to discussing and constructing a "source-network-load-storage" (SNLS) smart energy Internet (EI) model based on multi-element coordinated

Through the analysis of examples, it is verified that the proposed dual-storage joint scheduling optimization strategy can effectively improve the overall operation of the system, reduce ...

It is proved that this method can effectively coordinate the source, network and storage resources in the distribution network, improve energy utilization efficiency and reduce environmental ...

This paper first establishes the energy model of wind-solar-storage and cooling-heating power equipment in the integrated energy system.

Based on the application scenario, this paper explains how to use virtual power plant technology to participate in demand response power transaction, and describes the transaction rules and ...

In this paper, the techniques and methods involved in IES planning are summarized. First, the structure and characteristics of the IES are briefly introduced. Second, the key findings of the IES...

With the rapid development of new energy and DC, new technologies such as energy storage are emerging, and the characteristics of power grids are becoming more
