Hi, I am new in Hackintosh. I just completed the windows 10 installation on my dual boot system, and I noticed something, the GPU idle temperature on Catalina was much ...

Just after boot CPU's temperature hangs around 50c, but with time, even when idle, it can reach up to 80c.

Discussion on troubleshooting HWMONITOR issues in Yosemite, including missing CPU temperatures, voltages, and fan speeds.

I bought a second-hand Ryzen 7 5700g for R115 from eBay. Will be interesting to see how this 8-core/16-thread CPU/APU behaves in macOS. Already running Windows 11 on ...

Marvell Scalable mGig controllers integrates the following key features of Energy Efficient Ethernet (EEE), Precision Time Protocol (PTP)/1588v2, Synchronous Ethernet (Sync-E), a ...

However, there is a slight hike in temperature, which in reality might also lead to the TDP limits explained in 3). With regards to overclocking, I recall that the U-series chipsets ...

I've never seen the Memory Clock on my Vega 64 Liquid Cooled edition drop below 500Mhz even at very low temps (it usually sits at around 24/25 degrees C at idle). I am using a ...

Those are high temperatures, you can get a better idea by looking at the normal operating temperature ranges. You better get either a closed loop water cooling or a bigger heatsink with ...

Hi, I have and Asus Vivobook (X556UV) with high sierra. But my laptop stay always at 80°C; (With no program active) and arrive at 95°C;... the cpu-fan is off...
