What are the different types of mechanical energy storage systems?

Mechanical energies are divided into four types: Pumped hydroelectric energy storage, flywheel energy storage, compressed air energy storage, and gravity energy storage. These are prominent examples of widely employed mechanical energy storage systems in energy storage technology (3). Figure 3. Pumped Hydroelectric energy storage.

What materials are used for energy storage system?

Metal hydrides like magnesium and calcium hydrides, oxides, lead carbonates, calcium carbonates and various organic materials were used for this energy storage system (2). Pumped thermal energy storage system is an example of the above system, which involves the storage of electrical energy as thermal energy.
