---

US scientists developed a monocrystalline solar panel relying on "minicells" based on polysilicon on silicon oxide passivating contacts. The module works with laser light and can reportedly...

Laser beaming holds the promise of effectively implementing this paradigm. With this perspective, this work evaluates the optical-to-electrical power conversion that is created when a collimated laser beam ...

Laser beams powered by the sun are one small step closer to becoming a reality after researchers received funding to develop the pioneering technology. These lasers could eventually help...

A solar-pumped laser (or solar-powered laser) is a laser that shares the same optical properties as conventional lasers such as emitting a beam consisting of coherent electromagnetic radiation which can reach high ...

Researchers from the University of Ottawa, NRC and Fraunhofer ISE developed photonic power converters which convert 1446 nanometer laser light into electrical power with 53.6 percent.

In contrast, laser-induced water splitting utilizes renewable energy sources, like solar power, to power the lasers, making it a greener option. The process works by focusing intense laser beams onto a ...

This research aims to investigate the utilization of laser technology in improving the performance of power generation systems from renewable energy sources, focusing on solar, wind,...

A sunlight-powered laser could be used instead of fossil fuels to kickstart chemical processes for the energy-intensive production of fertilizer, the scientists say.

Advanced laser processing using laser sources has emerged as an efficient and reliable fabrication tool for scalable electricity-generator production, catering to harvesting of diverse ambient energy ...

## Use laser pointer to generate electricity from solar energy

A space solar power system (SSPS) is a next-generation energy technology that converts solar energy into laser light or microwaves on a geostationary satellite orbiting the Earth, transmits it to the ground, and uses ...
