Huijue Group offers industrial and commercial energy storage, PV-BESS -EV Charging, Off-grid / On-grid Microgrid, telecom site ...

We also proposed an improved deep Q-network approach for user-side battery energy storage charging and discharging strategy to reduce the costs and energy consumptions of charging and discharging ...

The charging and discharging plan of the energy storage system can be intelligently optimized according to the local electricity price to maximize the saving of ...

In this study, the author introduced the concept of cloud energy storage and proposed a system architecture and operational model based on the deployment characteristics of user-side...

This large-scale "power bank" charges when energy prices drop (like at 2 AM) and discharges during expensive peak hours, slashing costs for factories, data centers, and even your ...

This article divides into three types of regional features and effectively calculates the annual charging volume for each hour in each typical 24-hour period.

In this study, a multi-time scale optimal configuration approach for user-side energy storage is introduced, which takes into account demand perception.

User-side energy storage involves deploying energy storage technologies at the consumer's location to optimize energy usage and decrease expenses. This includes utilizing end-of ...

On the one hand, it alleviates the impact of high-current charging of charging piles on regional power grids during charging peaks, and on the other hand, it brings considerable benefits to ...

**User-side
station**

energy

storage

charging
