Are solar photovoltaic panels safe?

Demand for solar power is rising in a context of high energy prices and the drive towards a low-carbon future. But, as a new Emerging Risk Trend Talk report from Allianz Commercial highlights, the installation of solar photovoltaic panels introduces risks that must be mitigated if the potential of this power source is to be safely harnessed.

Why are solar panels a problem?

Solar arrays, even when big, sometimes have difficulty producing sufficient electricity for large buildings or power grids. In areas far from the equator, less direct sunlight reduces power production and worsens the issue. At nighttime, energy generation halts completely as photon flow to solar cells stops.

Why are solar panels not a good energy source?

This inconsistency in energy production means that in areas with less predictable sunlight, solar panels are not the most reliable or efficient energy source. These combined aspects highlight why solar panels are not the ideal solution for every individual or location.
