The solar system includes the Sun, planets, dwarf planets, moons, rings, asteroids, comets, and particles of dust.

NASA's real-time science encyclopedia of deep space exploration. Our scientists and far-ranging robots explore the wild frontiers of our solar system.

Its gravity holds the solar system together, keeping everything from the biggest planets to the smallest bits of debris in orbit around it. Even though the Sun is the center of our solar system and essential to ...

You are using an outdated browser. Please upgrade your browser to improve your experience.

Our solar system includes the Sun, eight planets, five officially named dwarf planets, hundreds of moons, and thousands of asteroids and comets. Our solar system is located in the Milky ...

The Solar System is the gravitationally bound system comprising the Sun and all natural objects that orbit it either directly or indirectly. This includes ...

The numbers displayed here are approximations. For more precise data, please visit [JPL Solar System Dynamics](#)

At the center of the Solar System is the Sun, a massive star that provides light and heat to the planets that orbit around it. In addition to the Sun and the planets, the Solar System also ...

Our solar system consists of our star, the Sun, and everything bound to it by gravity - the planets Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune; dwarf planets such as Pluto; ...

Our solar system is made up of the sun and all the amazing objects that travel around it.

What is in a solar system

The Solar System is made up billions of objects, including planets, moons, asteroids and comets that are all held in the Solar System by the gravitational ...

NASA Solar System Exploration Our Galactic Neighborhood Solar System Planets Moons Asteroids, Comets & Meteors

[/caption] The Solar System consists of the Sun, and everything bound to it by gravity. This includes the 8 planets and their moons, the ...

There are hundreds of moons in our solar system - even asteroids have been found to have small companion moons. Of the terrestrial (rocky) planets of the inner solar system, neither Mercury nor ...

Our Solar System consists of 8 planets, several dwarf planets, dozens of moons, and millions of asteroids, comets, and meteoroids. They are all bound by gravity to the Sun, which is the ...
