-----

I found two ways to determine how many elements are in a variable... I always get the same values for `len ()` and `size ()`. Is there a difference? Could `size ()` have come with an imported ...

Available options: ... `max_split_size_mb` prevents the allocator from splitting blocks larger than this size (in MB). This can help prevent fragmentation and may allow some borderline ...

So, the size of `size_t` is not specified, only that it has to be an unsigned integer type. However, an interesting specification can be found in chapter 7.18.3 of the standard: limit of `size_t` `SIZE_MAX` ...

If the size of the `int` is that important one can use `int16_t`, `int32_t` and `int64_t` (need the `iostream` include for that if I remember correctly). What's nice about this that `int64_t` should not have issues on a 32bit ...

The OP was asking "`Array.size ()` vs `Array.length`". From the previous discussions, it was make clear, that the "size" Function is not part of standard JavaScript but implemented by libraries. ...

In several C++ examples I see a use of the type `size_t` where I would have used a simple `int`. What's the difference, and why `size_t` should be better?

Although you cannot use different sized slides in one PowerPoint file, for the actual presentation you can link several different files together to create a presentation that has different ...

What is the difference between `.size()` and `.length` ? Is `.size()` only for arraylists and `.length` only for arrays?
