While U.S. solar remains more expensive than in countries like Australia, where systems can cost under \$1 per watt, American installers are working hard to close the gap.

While the photovoltaic panel shortage continues to disrupt renewable energy plans globally, adaptation and innovation are lighting the path forward. The question remains: Will 2026 bring relief, or is this ...

Worldwide, 2024 was a difficult year for the residential solar market. After several years of 30 percent annual growth in installations, 2024 saw a decline: fewer panels were installed in many ...

So far, the issues I'm describing apply mostly to utility-scale solar, in which large companies buy and sell millions of panels and are sensitive to even the smallest changes in panel ...

Wondering why solar panels cost so much? Learn what goes into a solar panel installation and whether it's still worth it in the long run.

Success stories can be particularly powerful, driving interest and creating desire among potential buyers when they see friends, family, or neighbors embracing solar energy. Additionally, the ...

NLR's bottom-up cost modeling methodology, shown here for residential PV systems, considers a wide set of factors and many interactions between them. These bottom-up models ...

We rounded up some of the most insightful responses and distilled them into the top 5 reasons people don't want to buy solar panels. We hope this gives you a better sense of the real and ...

U.S. consumer demand for renewable energy continues to grow, with more solar panel capacity installed in 2024 than in 2023, which saw more than in 2022. But U.S. trade policy is in flux, ...

Why is it difficult to buy this section of photovoltaic panels

Clean Energy Associates (CEA) issued a global PV cell and module supply report, noting that the United States' supply chain is "more than sufficient" for current deployment levels. The report...
